

# Mount a network share in ubuntu

- [Edit your fstab config](#)

# Edit your fstab config

1. First you need to run.

```
1. sudo nano /etc/fstab
```

2. This is the next line that you need to paste in. Make sure you have a directory created that you want to mount your share to.

```
1. //pathtoshare /localmounteddir cifs  
username=changeme,password=changeme,uid=1000,gid=1000 0 0
```
